

Existing questions | default design

1. $-9 + 11 - 6y - 18 = 5 - 19 - 5 - 12$
2. $4x^2 - 12x = 0$
3.
 - a) Find the linear function that passes through the points $(-12, -4)$ and $(9, 2)$.
 - b) Is the function increasing or decreasing?
 - c) Bonus: Sketch the function.
4. The linear function $f(x)$ passes through the point $(13, 12)$ and has a slope of -2 .
 - a) Find $f(x)$.
 - b) Find where the function intersects with the x axis.
 - c) Bonus: Sketch the function.

Solutions

1. 2.5
2. 3, 0
3. a) $y = \frac{2}{7}x - \frac{4}{7}$
b. Increasing, because the slope of the function is positive
c. Plot the two given points and draw the straight line through them.

4. a) $y = -2x + 38$
b. (19, 0)
c. Plot the given point and use the slope to draw the line.

Quadratic Equations Worksheet

1. $4x^2 + 20x + 24 = 0$

2. $-2x^2 + 24x - 70 = 0$

3. $-3x^2 - 3x + 60 = 0$

4. $x^2 + 20x + 99 = 0$

Solutions

1. $-2, -3$
2. $5, 7$
3. $4, -5$
4. $-9, -11$

Function Report

Function: $x^2 - 4$

variables: x

coefficients: $[1, 0, -4.0]$

roots: $2.0, -2.0$

Intersection with the y axis: -4

Derivative: $2x$

Extremums Points: $(0.0, -4.0)$

Up: $0 < x$

Down: $x < 0$

Function on the interval $[-5, 5]$.
