

Line height 1.0 | compact

1. Read each step carefully.
Start by identifying the unknown.
Collect like terms on each side.
Move variable terms to the left.
Move constant terms to the right.
Divide by the coefficient.
Substitute your answer to check it.
State your final answer clearly.

2. A second multiline paragraph:
 $2x + 6 = 14$
 $2x = 8$
 $x = 4$

Line height 1.5 | default

1. Read each step carefully.
Start by identifying the unknown.
Collect like terms on each side.
Move variable terms to the left.
Move constant terms to the right.
Divide by the coefficient.
Substitute your answer to check it.
State your final answer clearly.

2. A second multiline paragraph:
 $2x + 6 = 14$
 $2x = 8$
 $x = 4$
